XINDAO

Arcelik

PLUGANDPLAY

This is an overview of our traction, we primarily work with material producers, OEMs and brands.

WHY IS IT IMPORTANT

We see a strong trend towards using more sustainable materials. But how are these claims proven?

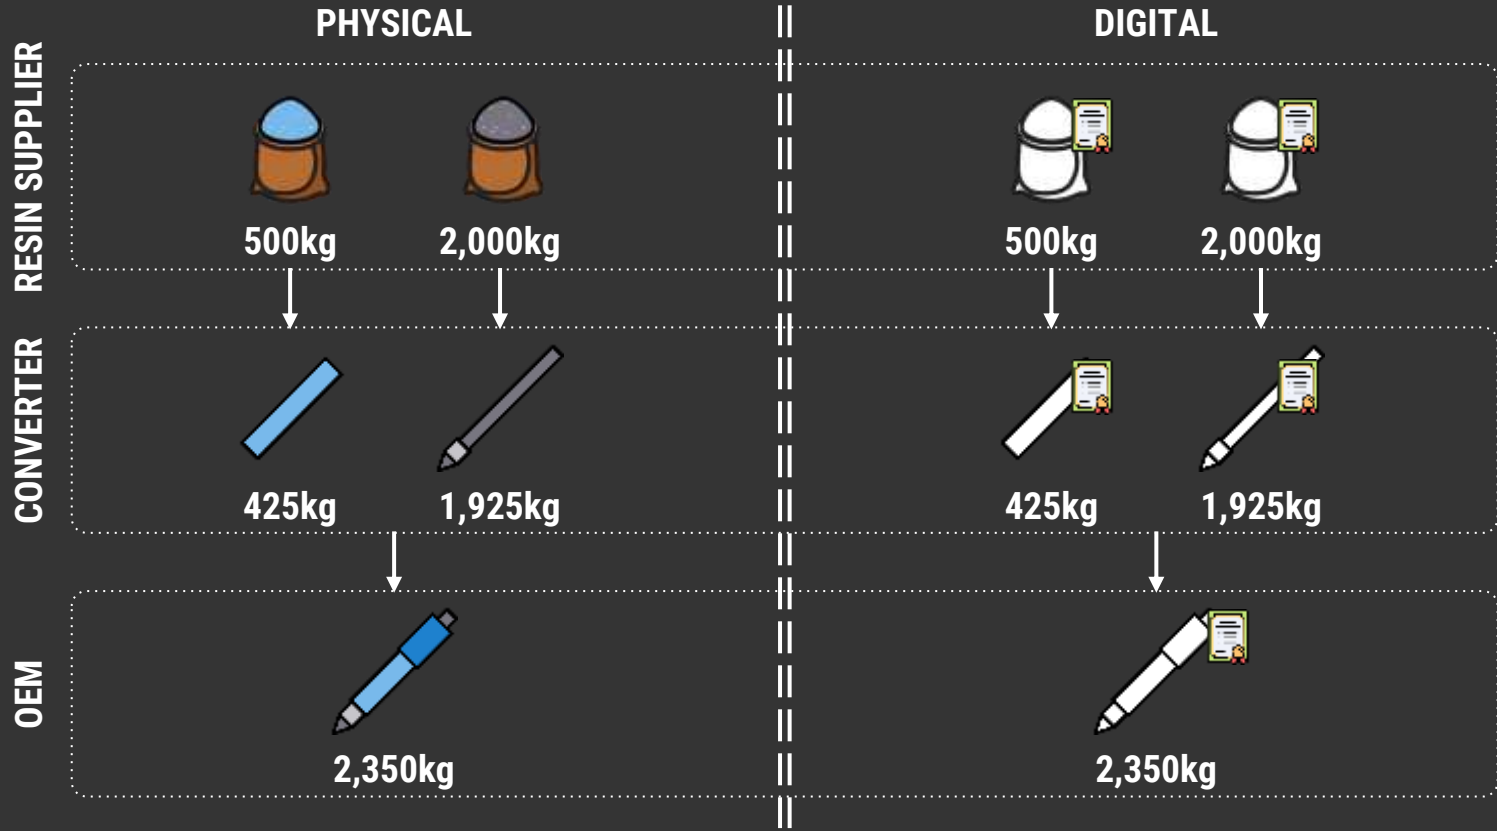

To: Customer
From: Supplier

Dear Customer,

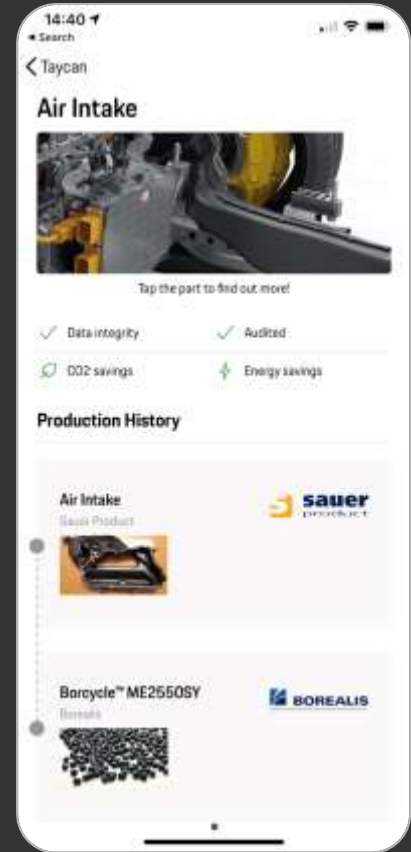

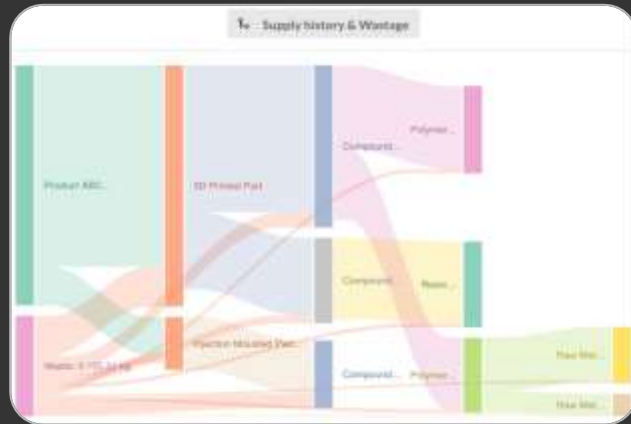

*Yes, I used recycled materials.
Here is a PDF of my certificates to
prove it.*

*Best,
Supplier*

Most brands rely on manual processes such as emailing suppliers to get proof of sustainable practices (e.g. the use of recycled content). This is very labour intensive and leaves room for errors/fraud.

Our technology creates a digital twin for every (kilo)gram of material. Creating a mass balance traceability from raw material to final product. By using blockchain we can replace trust in humans to an independent cryptographically secure system.

For a practical use case, please refer to our most recent work with Porsche. Video: <https://circularise.com/latest>

PLASTICS

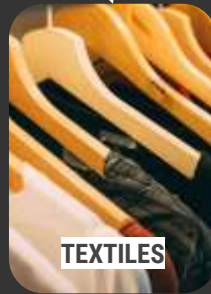

AUTOMOTIVE

APPLIANCES

ELECTRONICS

TEXTILES

CONSTRUCTION

PACKAGING

Even though our technology can trace any material. Our current focus is on plastics & chemicals used in various applications.

We have found the key to

enable transparency

while

protecting privacy

and

not appointing a central authority.

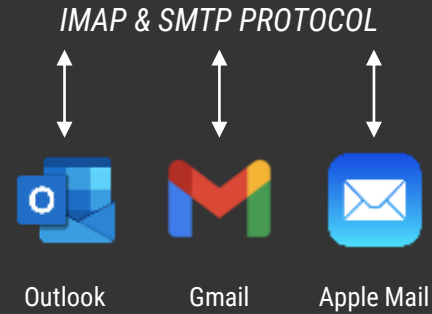

Most competing solutions compromise privacy or rely on a central authority. Our patented technology allows us to offer best of both worlds.

CLOSED APPROACH

My network uses it, so must I.

OPEN PROTOCOL APPROACH

It is the best solution for us.

We are working on an Open Protocol with other parties. Circularise Consortium is promoting a non-proprietary, no vendor-lock system for transparency to prevent monopoly.
