

# Financial and Operational Reporting:

**Empower** business users to make their **own reports**  
and turn **reporting pain** into **decision-making**  
**superpower**

Halkidon Shipping Corporation

# The headaches: Readiness, Reliability and Relevance of information

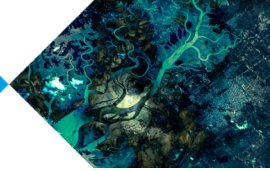

The lack of digitalized financial reporting creates the following inevitable problems that are common across the private shipping sector:

- Information is simply not available on **time**
- Inability to catch up with **new requirements**
- Heavy reliance on specific members of **staff**
- Susceptibility to human **errors**
- **Inconsistencies** in reporting over time
- **Multiplication** of effort
- Inability to directly **drill down** to the granular detail
- Lack of **internal control**

**R**eadiness  
**R**eliability  
**R**elevance

All of the above tend to repeat themselves in a **vicious cycle** that only results in both the **frustration of overloaded accountants** and the **dissatisfaction of management** and stakeholders.

# The solution: EPICOR - Maritime Accounting Software (MAS)

Global leader in shipping accounting and auditing with a decades-long association to the maritime industry

A globally acclaimed, well-established, full suite ERP, with thousands of global clients

A responsive, reliable local technical support provider, authorized by Epicor® ERP as a Partner

ATHENS TECHNOLOGY CENTER

EPICOR  
Authorized Partner

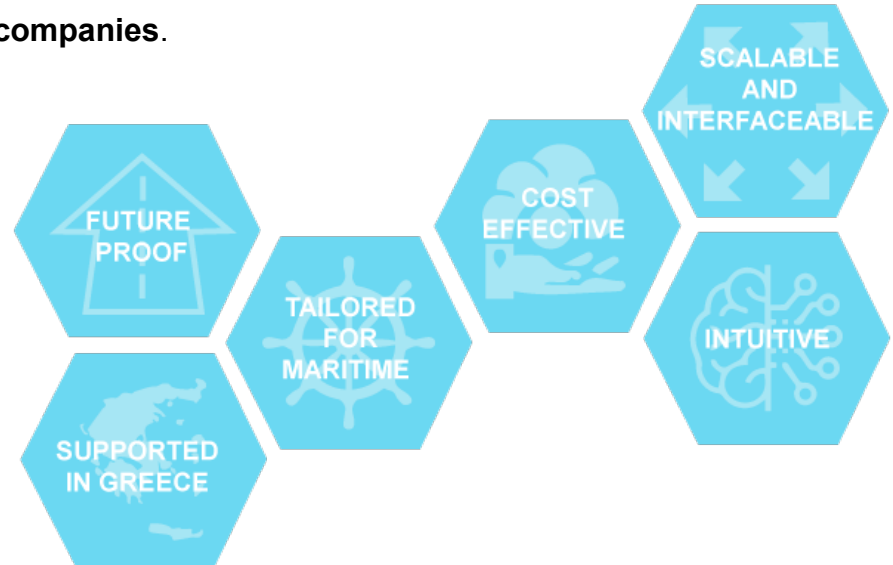

# The benefits: Automated financial and operational reporting

MAS is the answer for relevant, reliable and timely financial reporting and accounting, for maritime companies. MAS comprises two distinct and equally important elements:

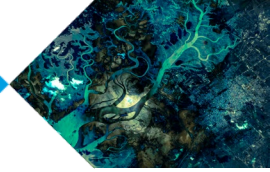

- **Integrated Financial and Operational Reporting** through preset customized report templates that source information from the accounting system as well as other systems in real time.
- **Accounting Software** specifically tailored for **maritime companies**.

We created a financial reporting process that enables **users** and **decision-makers** to access **reliable, consistently-prepared data** of their **choice, real-time**.

This is possible through the design of **Microsoft Excel report templates**, such as 'Profit & Loss at vessel level' or 'ESG KPIs' that would be **created by the users themselves** and **embedded in the financial suite** so as to draw information **without human intervention**.

# The benefits: How MAS helped Halkidon Shipping Corporation

- **The need for a new solution**
- **How Epicor MAS helped us**
- **Experience collaborating with Moore/ATC**
